# Electrical Preparation

June 2022

## OVERVIEW

Congratulations on purchasing your INshed! Once you decided where you would like to locate your INshed the next step is to ensure you have the proper electrical. We always recommend a licensed electrician to modify any electrical in your home.

## Electrical on INshed

### INshed Outlet:

This is the [standard receptor](#) that will be used on the INshed that the house electrical will need to connect to. We do offer direct connections, but you will need to inform your Project Manager that is the connection you would like.

The standard receptor is a 50A 125/250V 3 Pole, 4-Wire Locking. You can purchase an adapter to convert the outlet to a non-locking connector if needed.

---

## INshed Extension Cord:

50 Amp, 125/250 Volt, Locking Power cord connects the house to your INshed. You can purchase them in different lengths on [Amazon](https://www.amazon.com) or at a local RV Center. The locking ring creates a watertight seal between the power cord and the inlet.

## Interior Electrical:

There is an electrical panel box with four circuit breakers for the items in the INshed.

Breaker 1: Air Conditioner

Breaker 3: Lights

Breaker 2: Floorboard Heater

Breaker 4: Outlet Switches

Breaker locations can change please see the diagram with your unit.

---

## Electrical on House

### House Electrical Box:

You will want to ensure your house electrical box has enough service to add the 50AMP INshed to it. If you know the circuit breaker to the outlet you will be using you can always check it is a 50AMP breaker. If this is something you haven't done in the past or don't feel confident we recommend you call a licensed electrician to ensure you will be good to hook it up.

Directly connect your INshed to the house with an electrical box available on [Amazon](#).

### Warranty

We build the sheds so they can be pulled hence why they are built on a trailer. We realize most of our customers are not going to be road warriors. Yet, we still feel very confident that the materials we use will withstand the battle of the road. Now if you were to get a broken window or rain was to get in your RV this would be a claim on your insurance. The sheds are RVIA-certified recreational vehicles and can also be insured so they would be covered the same way as an RV. As mentioned, we have a one-year craftsmanship warranty. We also recommend upgrading your chassis if you will be traveling long distances.

Obviously, we won't cover wear and tear from hitting tree branches and going through drive-thrus.

We have a [google drive](#) with all the manufacturer warranty information from the products used in your shed. You should receive your 1-year INshed Craftmanship Warranty upon delivery.

### Thank you!

If you have any questions on permits, electrical, leveling, installation, or just on the unit itself please contact your Project Manager. [Info@theINshed.com](mailto:Info@theINshed.com) is a great spot to ask questions!
